TEAM ID: 753715

INTERNSHIP AT

Vardaam Web Solutions PVT. LTD

AN INTERNSHIP REPORT

Submitted by

HITEN JAYENDRASINH RATHOD

210410107135

In partial fulfilment for the award of the degree of

BACHELOR OF ENGINEERING

in

COMPUTER ENGINEERING

SARDAR VALLABHBHAI PATEL INSTITUTE OF TECHNOLOGY,

VASAD.

Gujarat Technological University, Ahmedabad

April, 2025.

SARDAR VALLABHBHAI PATEL INSTITUTE OF TECHNOLOGY, VASAD.

CERTIFICATE

This is to certify that the project report submitted along with the project entitled **INTERNSHIP (3180701)** has been carried out by **HITEN JAYENDRASINH RATHOD (210410107135)** under my guidance in partial fulfilment for the degree of Bachelor of Engineering in Computer Engineering, 8th Semester of Gujarat Technological University, Ahmedabad during the academic year 2024-2025.

Mrs. Rajvee Aarjav Desai
INTERNAL GUIDE

Ms. JAYNA SHAH
HEAD OF DEPARTMENT

GUJARAT TECHNOLOGICAL UNIVERSITY

CERTIFICATE FOR COMPLETION OF ALL ACTIVITIES AT ONLINE PROJECT PORTAL

B.E. SEMESTER VIII, ACADEMIC YEAR 2024-2025

Date of certificate generation : 20 April 2025 (15:33:20)

This is to certify that, ***Rathod Hitenkumar Jayendrasinh*** (Enrolment Number - 210410107135) working on project entitled with ***Recruit Management*** from ***Computer Engineering*** department of ***SARDAR VALLABHBHAI PATEL INSTITUTE OF TECHNOLOGY, VASAD*** had submitted following details at online project portal.

Internship Project Report	**Completed**

Name of Student : Rathod Hitenkumar Jayendrasinh

Name of Guide : Mrs. Rajvee Aarjav Desai

Signature of Student : _____

*Signature of Guide : _____

Disclaimer :
This is a computer generated copy and does not indicate that your data has been evaluated. This is the receipt that GTU has received a copy of the data that you have uploaded and submitted as your project work.

*Guide has to sign the certificate, Only if all above activities has been Completed.

18-April-2025

TO WHOM IT MAY CONCERN

This letter is to confirm that Hiten Rathod, a student at SVIT, VASAD has been interning with us at Vardaam Web Solutions PVT. LTD as a Trainee Application Developer since February 05th, 2025, under the guidance of Hitesh Solanki.

During his internship, Hiten has been working on Full Stack App Development. The internship is ongoing and is expected to end in May 2025.

This certificate is issued at the intern's request to fulfil academic requirements.

We wish him all the best in his future endeavours.

Yours faithfully,

For VARDAAMSOLUTIONS

Gunja Doshi - HR Manager

201, Trivia Complex, Natubhai Cir, Race Course, Vadiwadi, Vadodara, Gujarat 390007

SARDAR VALLABHBHAI INSTITUTE OF TECHNOLOGY VASAD

DECLARATION

We hereby declare that the Internship report submitted along with the Internship Project entitled Internship submitted in partial fulfilment for the degree of Bachelor of Engineering in Computer Engineering to Gujarat Technological University, Ahmedabad, is a Bonafide record of original project work carried out by me at Vardaam Web Solutions PVT. LTD under the supervision of MR. HITESH SOLANKI and that no part of this report has been directly copied from any students reports or taken from any other source, without providing due references.

Name: HITEN JAYENDRASINH RATHOD Sign of Student

Enrolment No: 210410107135

ACKNOWLEDGEMENT

The Internship opportunity I had with **VARDAAM WEB SOLUTIONS PVT. LTD** was an invaluable experience for learning and professional growth in the field of app development. I feel very fortunate to have been given this chance. I'm also deeply grateful

for the opportunity to work alongside so many talented individuals who guided me throughout my internship.

I extend my sincere thanks to MR. Hiten Solanki and the entire web development team for their guidance, mentorship, and for providing me with practical, hands-on experience. Their insights and support were instrumental in my learning process.

I also want to express my appreciation to all the other developers, designers, and staff at Nextegen Technologies who I encountered during my time there. Their collaborative spirit and willingness to help contributed significantly to the success of my internship.

Finally, I am thankful to my friends, colleagues, and everyone who offered their support, directly or indirectly, throughout this enriching internship experience.

ABSTRACT

My internship at Vardaam Web Solutions PVT. LTD *provided a practical application of my academic knowledge in app development. I gained hands-on experience across the full development stack, utilizing Figma for UI/UX design, and building dynamic interfaces with HTML, CSS, JavaScript, TypeScript, Bootstrap, and Tailwind CSS. On the backend, I worked with Node.js to create robust Rest-API's.*

A significant part of my internship focused on the 'Recruit Management' application, a platform designed for employees as well as for recruiters which facilitates the process of recruitment. This project allowed me to contribute to all stages of the software development lifecycle, from initial planning and design to implementation and testing. I also utilized git for version control, gaining valuable experience in agile development methodologies.

This internship significantly enhanced my technical skills and provided a comprehensive understanding of the web development process. I am grateful for the opportunity to have worked on a real-world project and collaborate with experienced professionals, which has solidified my passion for web development and prepared me for future career endeavours.

CHAPTER 1: INTRODUCTION

1.1 INTRODUCTION:

My internship at Vardaam Web Solutions PVT. LTD provided a practical introduction to the world of app development, a field that, much like application development, CRM software, QA management to solve real-world problems through technological innovation. In today's digital age, efficient and user-friendly web applications are essential for businesses and individuals alike. This internship allowed me to explore and contribute to the development of such applications, focusing on the entire software development lifecycle.

1.2 MOTIVATION:

The primary motivation for this internship was to bridge the gap between theoretical knowledge gained in academic studies and practical application in a professional setting. The objective was to develop proficiency in modern web development technologies and methodologies, contributing to a real-world project, the "Recruit Management" application. This application, designed for facilitating the process of recruitment process, showcasing the potential of app development to enhance recruiters and employee interaction.

1.3 OBJECTIVE:

The objectives of my internship were to gain practical experience in full-stack App development, develop proficiency in relevant technologies like Figma, HTML, CSS, JavaScript, TypeScript, and Node.js, learn to utilize Git for version control, contribute to the 'Recruit Management' application, and understand the complete software development lifecycle.

1.4 CONTRIBUTION:

My contribution involved working across the full development stack, from designing user

interfaces with Figma to implementing frontend functionalities using HTML, CSS, JavaScript, TypeScript. I also gained experience in backend development with Node.js. Furthermore, I utilized git for version control, learning agile development practices and collaborative workflows. This experience was not just about coding; it was about understanding the entire process of creating a functional and user-friendly application.

1.5 ORGANIZATION OF REPORT:

This report is organized to reflect my learning journey. Chapter 1 provides this introduction, outlining the project context and objectives. Chapter 2 will detail the technologies and methodologies I encountered. Chapter 3 will describe my specific contributions to the "Recruit Management" project. Chapter 4 will discuss the challenges faced and lessons learned, and Chapter 5 will conclude with a reflection on the overall internship experience and its impact on my future career goals.

CHAPTER 2: LEARNING RESOURCES

This chapter details the resources I utilized to gain the necessary knowledge and skills for my web development internship at Vardaam Web Solutions PVT. LTD. These resources provided a strong foundation in both frontend and backend technologies, enabling me to contribute effectively to the "Recruit Management" project.

2.1. FRONTEND DEVELOPMENT FUNDAMENTALS

- HTML
- CSS
- JavaScript
- TypeScript

2.2. BACKEND DEVELOPMENT

- Mango DB
- NodeJS

2.3. DATABASE FUNDAMENTALS

2.4. UI/UX DESIGN AND PROTOTYPING (FIGMA)

2.5. PROJECT MANAGEMENT WITH JIRA

2.6. ADDITIONAL LEARNING RESOURCES

2.1 FRONTEND DEVELOPMENT FUNDAMENTALS:

To establish a solid understanding of frontend development, I utilized the following resources:

2.1.1 HTML (Hyper Text Markup Language):

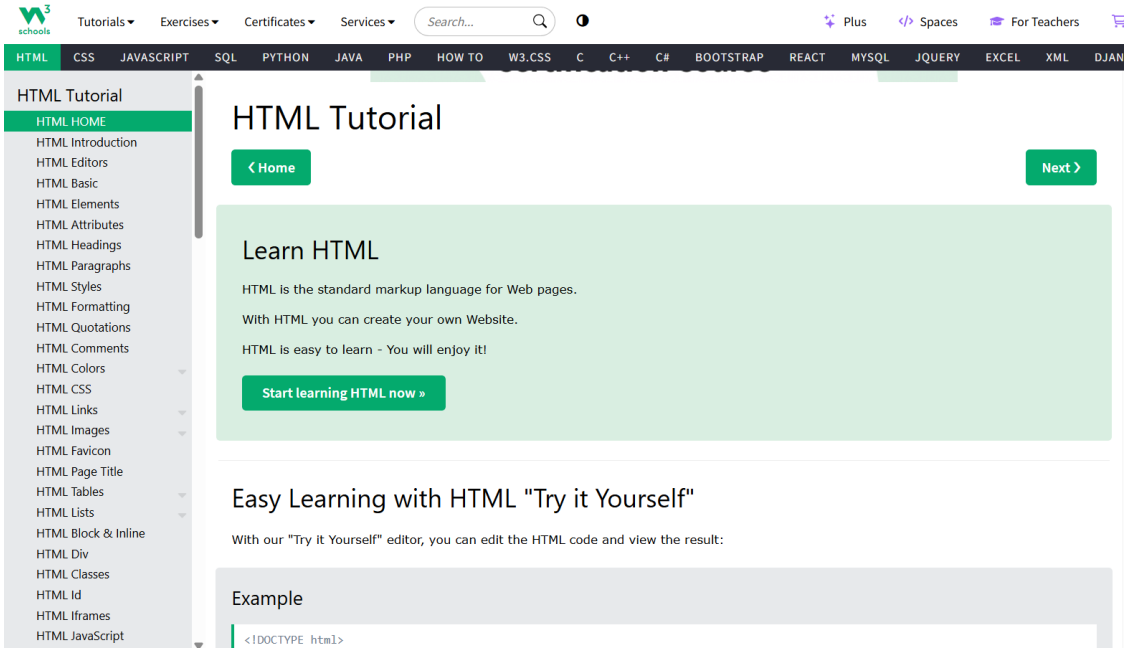

Fig. No: 2.1.1

- I learned the fundamental structure of web pages using the comprehensive tutorials at HTML Tutorial.

- Specifically, I gained proficiency in:
    - Creating basic HTML documents with tags like <html>, <head>, <body>, and headings.
    - Structuring content using elements such as <p>, , , and lists.
    - Implementing hyperlinks with the <a> tag and understanding relative and absolute paths.
    - Working with images and multimedia using <img>, <video>, and <audio> tags. ○ Creating forms for user input with <form>, <input>, <textarea>, and <select> elements.
    - Understanding HTML5 semantic elements like <header>, <nav>, <article>, <section>, and <footer> for improved accessibility and SEO.
    - Learned about HTML tables and how to properly create them.

2.1.2 CSS:

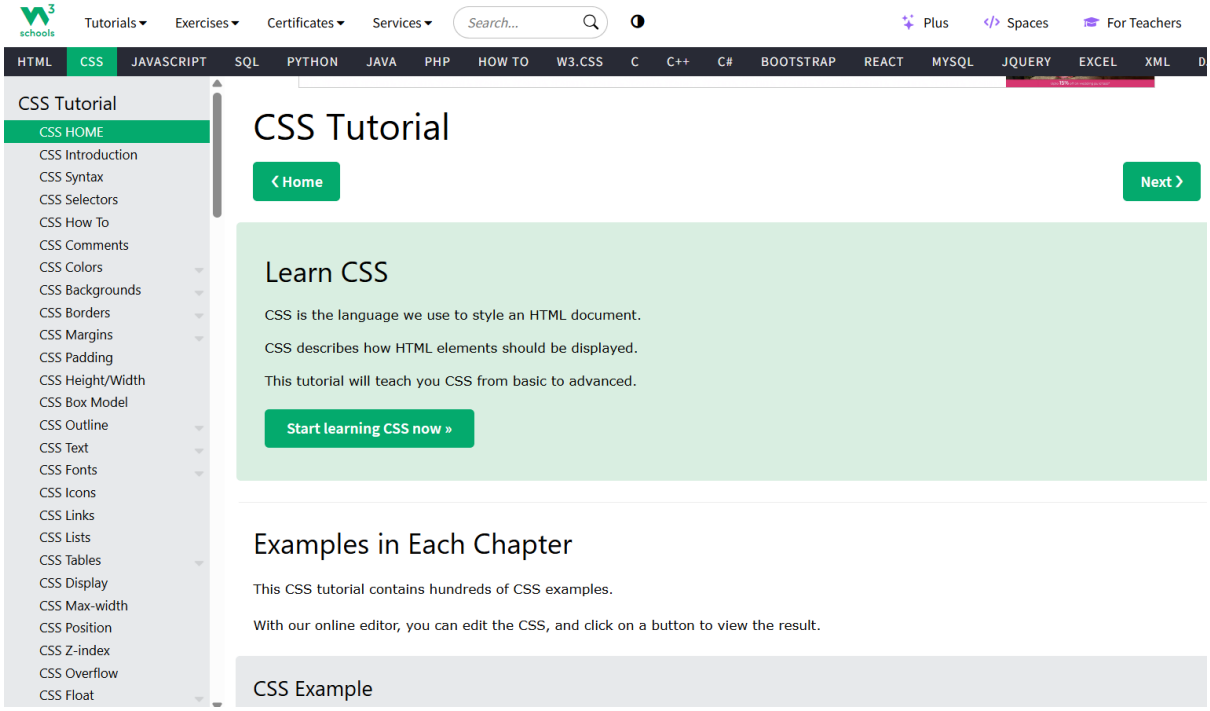

Fig. No: 2.1.2

- To style and design web pages, I studied CSS using the resources at CSS Tutorial.
- This included learning about:
    - CSS selectors (element, class, ID, attribute) and how to apply styles to specific elements.
    - CSS properties for text, colors, backgrounds, borders, and spacing.
    - Layout techniques using the box model, flexbox, and CSS Grid.
    - Responsive design principles with media queries to create websites that adapt to different screen sizes.
    - Understanding CSS positioning such as relative, absolute, fixed and sticky.
    - Learning about CSS animations and transitions.

2.1.3 JAVASCRIPT:

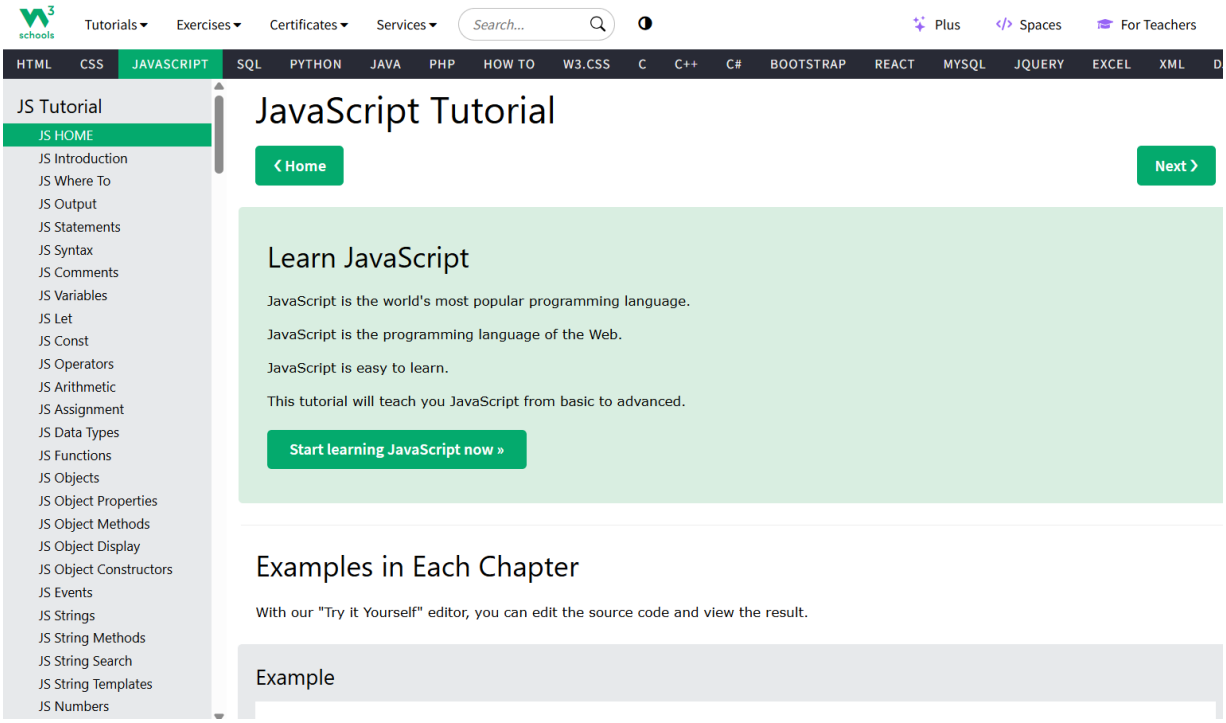

Fig. No: 2.1.3

- For adding interactivity and dynamic behavior to web pages, I learned JavaScript from JavaScript Tutorial.
- This covered:

- Core JavaScript concepts like variables, data types, operators, and control flow (if/else, loops).
- DOM (Document Object Model) manipulation to dynamically update and modify web page content.
- Event handling to respond to user interactions (clicks, mouseovers, form submissions).
- Asynchronous programming with callbacks, promises, and async/await for handling tasks that take time to complete.
- Learning about how to use JSON.
- Understanding the basics of ES6 features.

2.1.4 TypeScript:

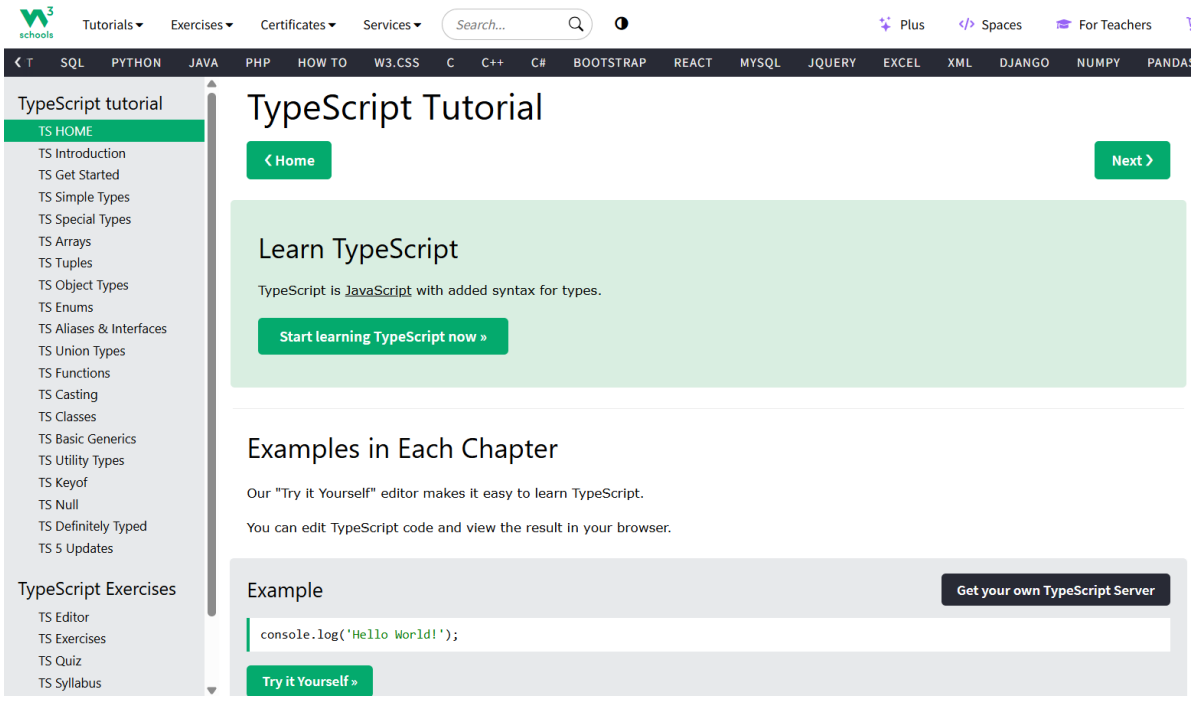

Fig. No: 2.1.4

- TypeScript is a strict syntactical superset of JavaScript. This means any valid JavaScript code is also valid TypeScript code, but TypeScript adds additional features like static typing.
- This included:
    - It's heavily used with frameworks like Angular, React, and Vue.js to add type safety and IDE support, making frontend development more robust and efficient.
    - TypeScript is also used on the server side, especially with Node.js and frameworks like Express.js and NestJS, offering a consistent development experience across frontend and backend.
    - Developers use TypeScript to create libraries and tools because its type declarations can help others understand how to use the library correctly, even if they use JavaScript.

2.2 BACKEND DEVELOPMENT:

To learn backend development and specifically Node JS, I used the following resource:

2.2.1 LEARN JAVASCRIPT PROGRAMMING – FULL COURSE WITH MINI- PROJECTS:

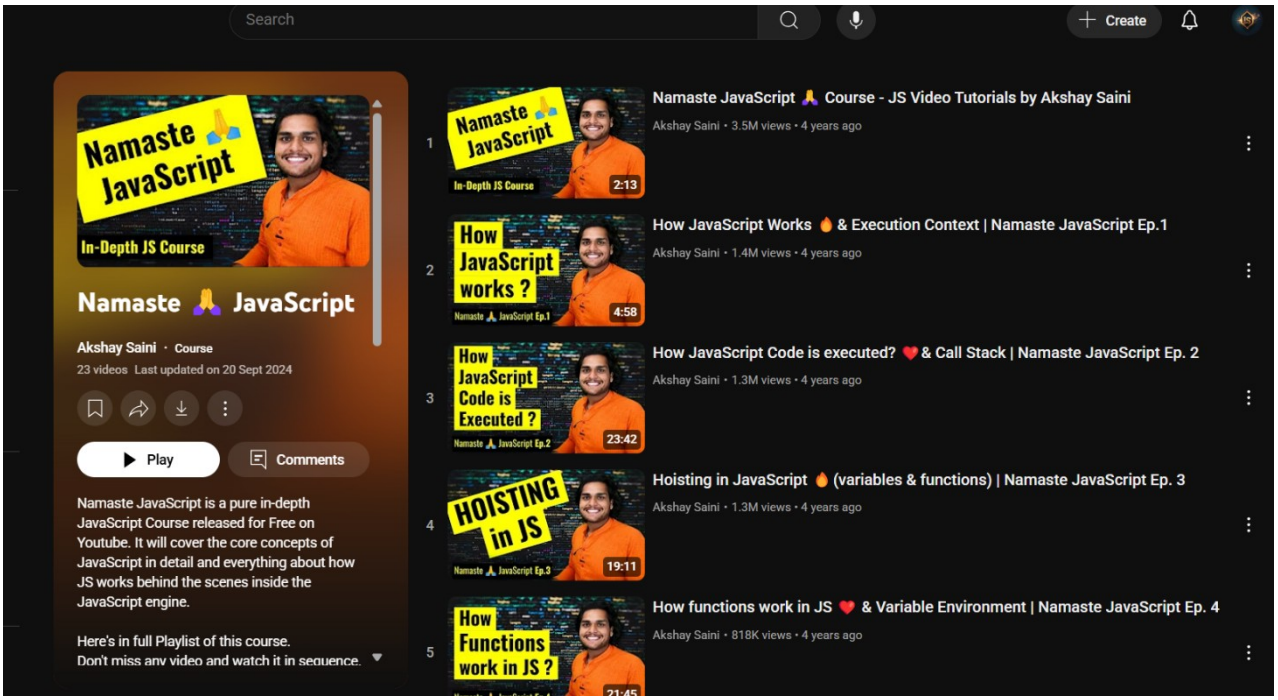

Fig. No: 2.2.1

I gained a comprehensive understanding of JavaScript programming through the full course provided by Namaste JavaScript.

This 8-hour course provided a structured approach to learning JavaScipt and included practical mini-projects to reinforce theoretical concepts.

Specifically, I learned about:

- JavaScript Fundamentals:
  - Understanding the JavaScript syntax, data types (integers, strings, booleans, etc.), variables, and operators.
  - Learning about control flow statements (if/else, switch, loops) for decision-making and iteration.
- Object-Oriented Programming (OOP) in JavaScript:
  - Grasping the concepts of classes, objects, inheritance, polymorphism, and encapsulation.

- Learning how to design and implement classes and objects to model real-world entities.

- Data Structures and Collections:
  - Working with arrays, lists, dictionaries, and other data structures for efficient data storage and manipulation.
  - Learning about how to use generic collections.
- File Handling and Input/Output:
  - Learning how to read and write data to files.
  - Learning how to handle user input from the console.
- Exception Handling:
  - Understanding how to handle runtime errors and exceptions to preventprogram crashes.
- Mini-Projects:
  - The course included several mini-projects that allowed me to apply my knowledge and build practical applications.
  - These projects helped me understand how to combine different JavaScript Backend concepts to create functional programs.
- Leaning modules.
- Using different modules for different purpose.

I learned the core concepts of Node.js, including its event-driven, non-blocking I/O model, which enables efficient handling of concurrent requests.

Specifically, I gained proficiency in:

- JavaScript Runtime Environment:
  - Understanding how Node.js uses the V8 JavaScript engine to execute JavaScript code outside of a web browser. o Learning about the Node.js event loop and its role in asynchronous programming.
- Modules and Packages:
  - Learning how to use and create Node.js modules for code organization and reusability.

- Understanding the Node Package Manager (npm) and how to install and manage dependencies.

- Asynchronous Programming:
  - Mastering asynchronous programming techniques with callbacks, promises, and async/await.
  - Learning how to handle asynchronous operations such as file I/O and network requests.
- HTTP and Networking:
  - Building HTTP servers and handling HTTP requests and responses using the built-in http module.
  - Learning how to create RESTful APIs for data exchange between the frontend and backend.
- Express.js Framework:
  - Utilizing the Express.js framework to simplify web application development.
  - Learning how to define routes, handle middleware, and build API endpoints.
    - Working with JSON: ○ Learning how to parse and stringify JSON data for data exchange.
    - Database Interaction:
  - Learning how to connect to and interact with databases (e.g., MongoDB) using Node.js drivers.
    - Learning about how to use environment variables.
    - Learning about how to handle errors.

2.3 DATABASE FUNDAMENTALS:

To understand how to store and manage data for web applications, I explored the following resource:

Introduction to Relational Databases:

- NoSQL stands for "Not Only SQL". It refers to a group of databases that store data in a non-tabular format (unlike traditional relational databases that use tables and rows).
- Specifically, I learned about:

o Database Concepts:

- In contrast, **NoSQL databases** store data in a **more flexible way**, depending on the type (documents, key-values, graphs, etc.).
- Learning about primary keys, foreign keys, and constraints.

o SQL (Structured Query Language):

- Gaining proficiency in writing SQL queries to retrieve, insert, update, and delete data from relational databases.
- Learning about different SQL commands, such as SELECT, INSERT, UPDATE, DELETE, and JOIN.

o Database Design:

- Understanding the principles of database design, including normalization and entity-relationship modeling.
- Learning how to design efficient and scalable database schemas. o Database Management Systems (DBMS):
- Learning about different relational database management systems, such as Atlas cloud service.
- Understanding the basic concepts of how a database management system works.

o Database Transactions:

- Understanding the concept of database transactions and how to maintain data integrity.

o Database indexing.

2.4 UI/UX DESIGN AND PROTOTYPING:

To enhance my design and prototyping skills, I utilized Figma. While I did not use formal online courses for Figma, I extensively explored its features through online tutorials, documentation, and hands-on practice, focusing on creating user interfaces, user flows, and interactive prototypes.

Figma Fundamentals:

- I learned the basic interface and tools within Figma, including frames, shapes, text, and image placement.
- Specifically, I gained proficiency in:
    - UI Design:
        - Creating clean and intuitive user interfaces for web applications, focusing on user experience (UX) principles.
        - Designing consistent layouts and visual styles using color palettes, typography, and spacing.
        - Creating reusable components and styles for efficient design workflows.
    - Prototyping:
        - Building interactive prototypes to simulate user flows and test design concepts.
        - Using Figma's prototyping features to create transitions, animations, and interactive elements.
        - Learning how to create wireframes and high-fidelity prototypes.
    - Collaboration:

- Understanding Figma's collaboration features for real-time design feedback and teamwork.
- Learning how to share designs and gather feedback from stakeholders.

o Component Libraries:

- Creating and using component libraries.
- Learning how to create variants.

o Auto Layout:

- Learning how to use auto layout to make responsive designs.

o Plugins:

- Learning how to use plugins to increase efficiency.

2.5 Version Control using G:

Git is a powerful, open-source distributed version control system widely used in modern software development. It allows multiple developers to work on a project simultaneously, track changes, revert to previous versions, and collaborate efficiently. Git has become an essential tool in Agile environments where frequent iterations, collaboration, and flexibility are key

- Git Fundamentals:
- I learned the basic interface and functionalities of GitHub, focusing on its role in agile project management.
- Specifically, I gained proficiency in:
    - Agile Methodologies:
        - Collaboration: Enables multiple developers to work together without overwriting each other's code.
        - Version Control: Maintains a complete history of changes, facilitating quick rollbacks and tracking who made what changes and when.
    - Project Setup:
        - Use git init to start a new Git repository or clone an existing one with git clone.
        - Set up a remote repository on platforms like GitHub, GitLab, or Bitbucket for collaboration.
    - Issue Tracking and Management:
        - Integrate Git with issue tracking tools like Jira, Trello, or GitHub Issues.
        - Use labels, assignees, and milestones to organize and prioritize work.
        - Learning how to use GitHub.

- Sprint Planning and Execution:
    - Use Git-based tools to break down epics into user stories and tasks.
    - Assign tasks to team members with estimated effort and deadlines.
- Reporting and Analysis:
    - Use Git logs and analytics tools (e.g., GitStats, GitHub Insights) to monitor commit frequency, contributor activity, and code changes.
    - Visualize progress through burndown charts and velocity tracking linked with Git commits.
- Workflow Management:
    - Define a clear Git workflow to manage code contributions, testing, and deployment.
    - Establish review and approval processes to maintain code quality.
- GitHub administration basics.

2.6 ADDITIONAL LEARNING RESOURCES:

In addition to the specific resources listed above, I also explored various online resources, including blog posts, articles, documentation, and community forums, to stay updated on the latest trends and best practices in web development. These resources provided valuable insights and helped me to expand my knowledge beyond the core curriculum.

- Online Documentation:
    - I regularly consulted official documentation for technologies like Node.js, Express.js, and specific libraries or frameworks used in the project. This provided accurate and up-to-date information on features, APIs, and best practices.
- Blog Posts and Articles:
    - I followed reputable web development blogs and publications to stay informed about industry trends, emerging technologies, and best practices. These resources provided practical tips, tutorials, and insights into real-world development challenges.
- Community Forums and Q&A Sites:
    - I actively participated in online forums and Q&A sites like Stack Overflow to seek solutions to specific coding problems and learn from the experiences of other developers. This allowed me to gain practical knowledge and troubleshoot issues efficiently.
- YouTube Tutorials:
    - I utilized YouTube tutorials to learn visual and step-by-step guides on specific technologies or techniques. This was very helpful for visual learning.
- Version Control (Git) Documentation:
    - I also learned about Git and GitHub. I used the official git

documentation and github documentation to understand how to properly use version control.

- API Documentation:
    - I learned how to read and use API documentation. This was very important for integrating with external services.
- Online Courses (Supplemental):
    - While the Coursera database course was listed specifically, I also used smaller courses on platforms like Coursera and YouTube to quickly learn specific topics that were needed for the project.

3.1 Database:

3.1.1 MongoDB - NoSQL:

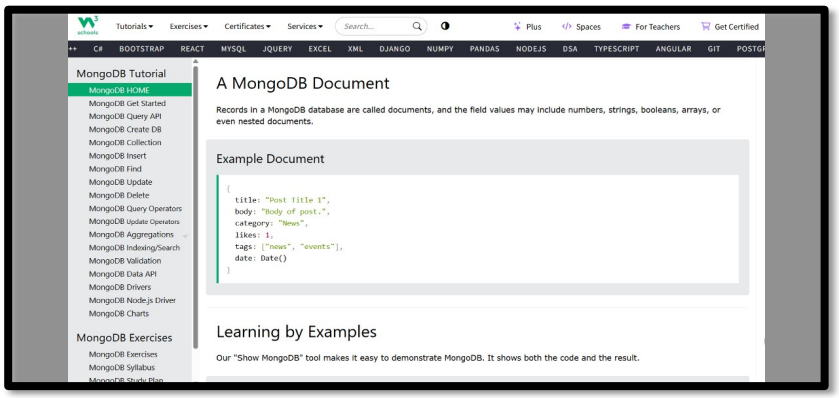

Fig No: 3.1.1

MongoDB is a **NoSQL database** that stores data in a **flexible, JSON-like format** called **documents**. It's designed to handle large amounts of unstructured or semi-structured data and is widely used in modern web and mobile applications. Database

- Collection
- Document
- CRUD Operations
- Schema-less (Flexible)
- Embedded Documents & Arrays
- Query Operators

CHAPTER 4: IMPLEMENTATIONS

4.1 UI/UX:

My UI/UX implementation efforts during the ‘Recruit Management' project were focused on creating an intuitive and engaging user experience. Utilizing Figma, I began by designing wireframes and prototypes that prioritized clear navigation and efficient task completion. These designs were iteratively refined based on user feedback and usability testing, ensuring that the application's interface met the specific needs of its target audience: employees within the company. I paid close attention to visual hierarchy, color palettes, and typography to create a consistent and aesthetically pleasing design that aligned with the company's branding.

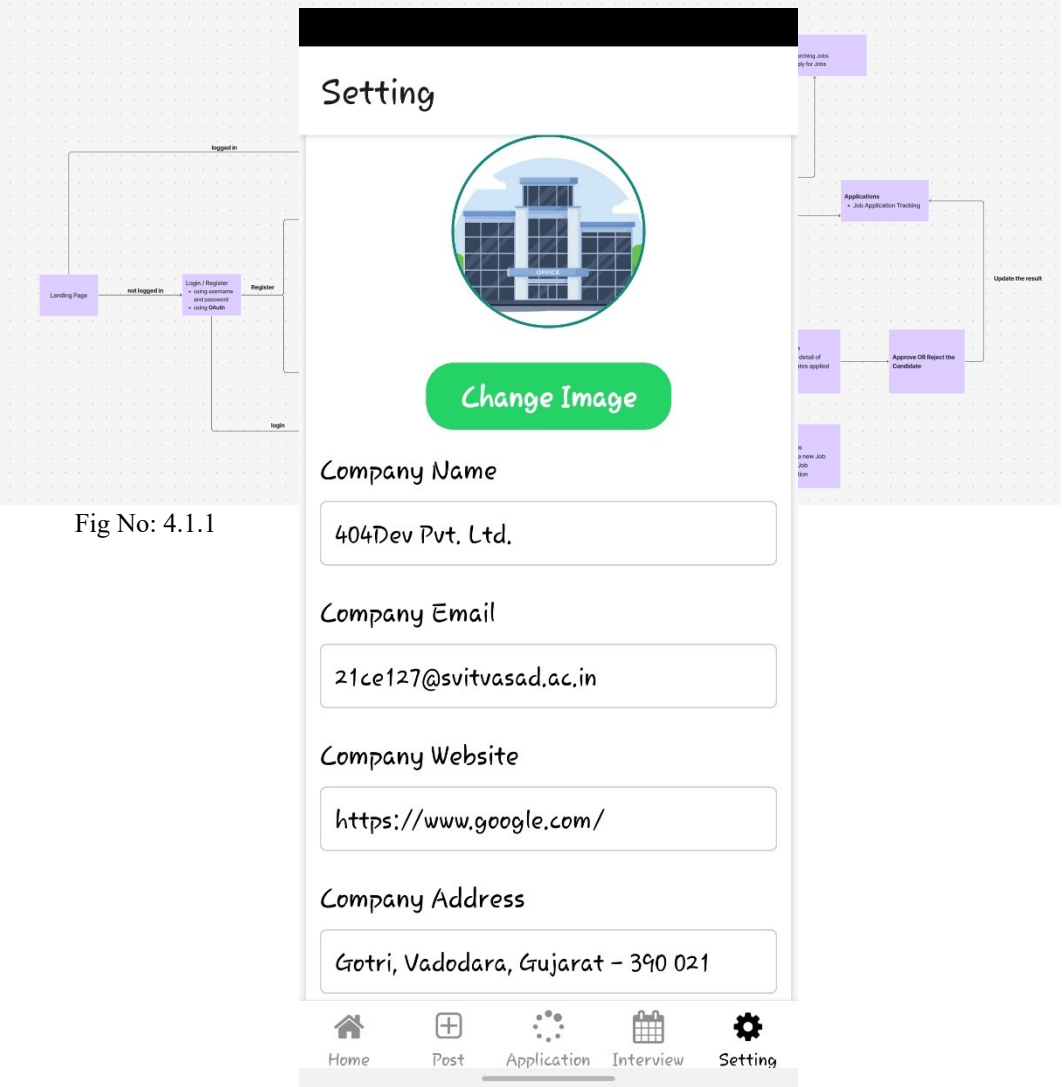

Fig No: 4.1.1

Fig No: 4.1.2

4.2 DESIGNING PRINCIPLES AND TOOLS:

The design of the 'Recruit Management' application adhered to core UI/UX principles, emphasizing user-centered design, consistency, and accessibility. We

prioritized a clean and intuitive interface, ensuring that users could easily navigate and complete tasks. Key principles applied included:

- Clarity: Ensuring all elements were easily understandable.
- Consistency: Maintaining a uniform visual language across the application.
- Feedback: Providing clear visual and interactive feedback to user actions.
- Hierarchy: Establishing a clear visual hierarchy to guide user attention.
- Accessibility: Adhering to accessibility guidelines to ensure usability for all users."

To bring these principles to life, we utilized a range of design tools. Figma served as the primary platform for UI/UX design, enabling us to create wireframes, prototypes, and high-fidelity mockups. Its collaborative features were invaluable for team feedback and iterative design. We also leveraged:

- Color Palettes and Typography: To maintain brand consistency and visual appeal.
- Grid Systems (Bootstrap/Tailwind): To create responsive and scalable layouts.
- Component Libraries: To improve workflow, and keep the design consistent.
- Wireframing and Prototyping: To test design concepts and user flows before development.

These tools and principles allowed us to create a user-friendly and aesthetically pleasing application.

4.3 JavaScript MINIPROJECTS:

JavaScript course included a series of mini-projects designed to provide practical application of the JavaScript. These projects were instrumental in solidifying my understanding of core JavaScript concepts and bridging the gap between theoretical knowledge and practical coding skills.

- Reinforcing Fundamental Concepts:
    - These projects covered a broad spectrum of JavaScript fundamentals, including data types, control flow structures (loops and conditional statements), object-oriented programming (OOP) principles, and data structures.
    - By actively building these mini-applications, I was able to observe and understand how these concepts operate within real-world scenarios.
    - This also helped with understanding of the modules.
- Developing Problem-Solving Abilities:
    - Each project posed unique challenges, necessitating the application of analytical and logical thinking to devise effective solutions.
    - This process significantly enhanced my problem-solving skills and fostered a more algorithmic approach to coding.
- Practical Application of Object-Oriented Programming (OOP):
    - Several mini-projects were specifically designed to demonstrate the application of OOP principles, such as class creation, inheritance implementation, and polymorphism.
    - This hands-on experience was crucial in grasping the power and versatility of OOP within the JavaScript.
- Building Functional, Small-Scale Applications:
    - These projects resulted in the creation of small, yet functional, applications that showcased the practical applications of backend programming.

- This experience provided a tangible sense of accomplishment and demonstrated the ability to create working applications.

- Boosting Confidence and Proficiency:

  - Successfully completing these mini-projects significantly increased my confidence in my JavaScript programming abilities. It also improved my ability to read and understand JavaScript documentation.

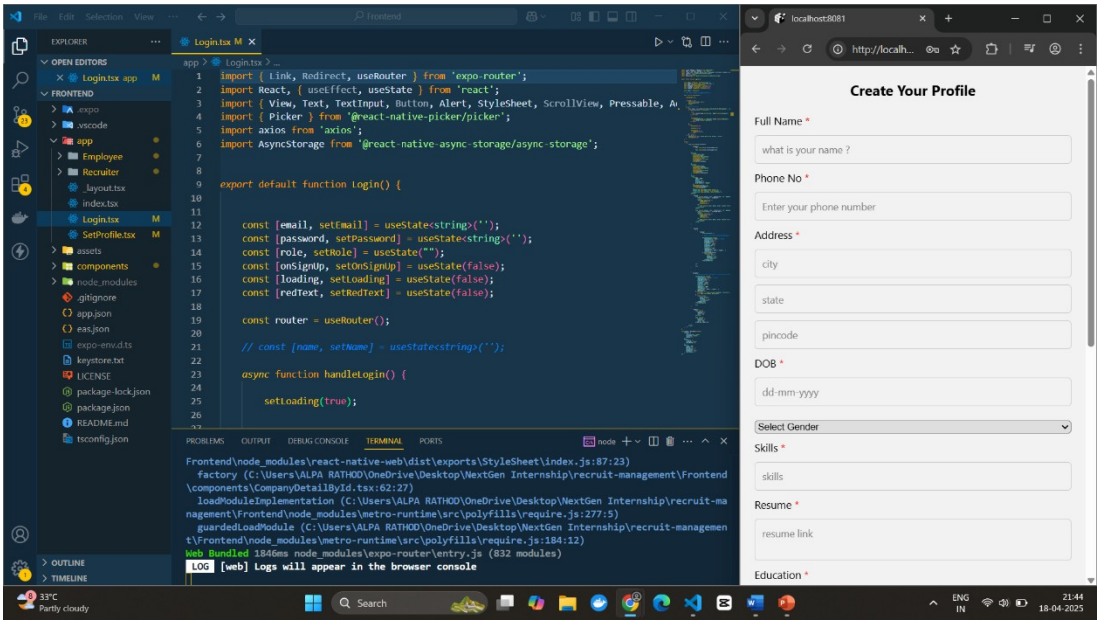

Fig No: 4.3.1

4.4 Version Control:

Git is an essential tool for managing your codebase, especially in team-based software development. Whether you' re working solo or collaborating on a recruit management app

using React Native and Node.js, Git helps you keep your work organized, versioned, and safe.

- Version Control:
    - Every time you change something—like updating the candidate dashboard or fixing a bug in the recruiter login—you can **track it** using Git.

Key Benefits:

- Branching and Parallel Development:
    - Work on features independently using branches. Multiple developers can work without interfering with each other.
- Team Collaboration:
    - Easily collaborate using platforms like GitHub or GitLab. Use Pull Requests for code review, discussion, and feedback.
- Bug Tracking and Fixing:
    - Track who introduced a bug and where. Create a dedicated branch to fix it without affecting the main codebase.
- Testing Without Risk:
    - Experiment freely on a new branch without risking the main app. Test new features like "admin panel", then merge once verified.

GitHub encourages collaboration by allowing you to track changes with the benefit of version control.

Fig No: 4.4.2

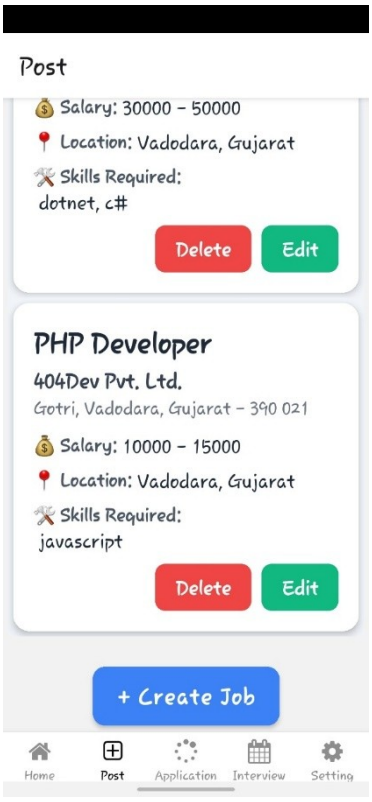

Fig No: 4.4.3

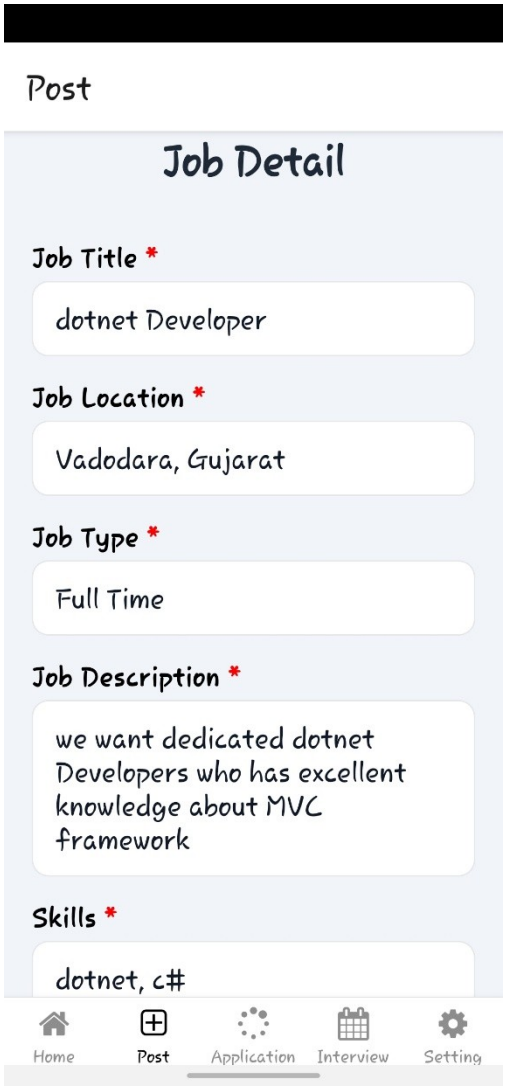

Fig No: 4.4.4

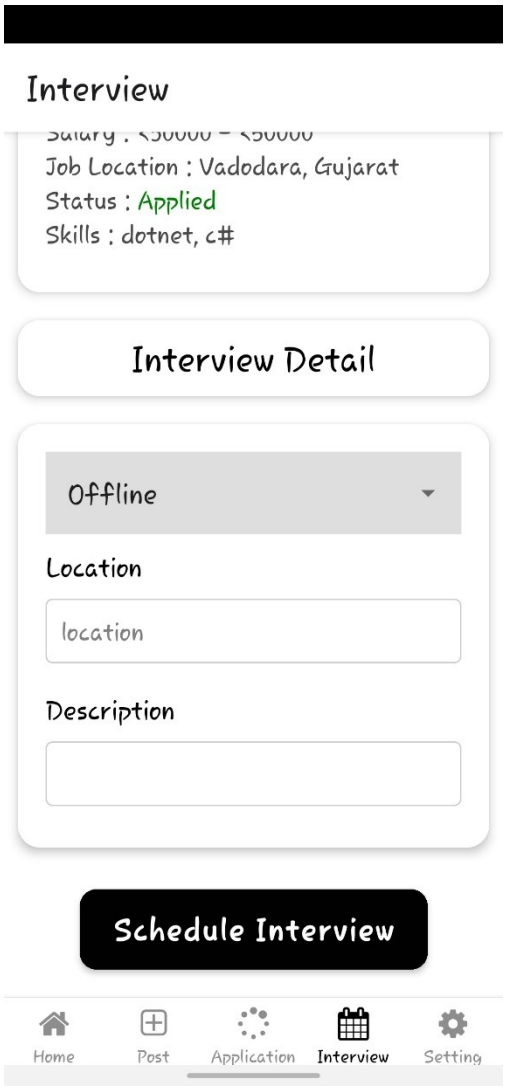

Fig No: 4.4.5

❖ CONCLUSION:

"In conclusion, the 'Recruit Management' project, developed during my internship at Vardaam Web Solutions PVT. LTD., showcases a practical application of modern App development technologies to address a real-world project. The project demonstrates a commitment to creating a user-friendly and efficient platform recruitment process, leveraging React for a dynamic frontend and Node.js Web API for a robust backend. This approach highlights the adaptability of these technologies in building collaborative tools.

The project's focus on secure user authentication via bcrypt and JWT, coupled with the implementation of features like lazy loading and responsive design with Tailwind CSS, illustrates a dedication to both functionality and user experience. Despite being an ongoing endeavour, the 'Recruit Management' project exhibits a solid foundation for future development and scalability.

While facing challenges inherent in any App development project, such as integrating diverse technologies and ensuring seamless data flow between frontend and backend, the project's progress underscores the team's ability to navigate these complexities. Its reliance on tools like Jira for project management and MongoDB for data storage demonstrates a structured and professional approach, positioning the 'Recruit Management' application for successful completion and long-term utility."
